

Gemco Shed Emergency & Exit Lighting

CLIENT: Vic Track

WORKS: Installation of Emergency and Exit lighting system in Gemco shed

CLIENT REQUIREMENTS

Our client required the supply and installation of an emergency and exit lighting system within the 300 metre long diesel maintenance workshop located adjacent to the busy Melbourne / Sydney rail link.

JNJ SOLUTION

A brief outline was provided with the desired locations of the light fittings shown. JNJ Electric then provided a range of solutions to be able to run in the required cabling and install the necessary light fittings while working in an active workshop without disrupting their scheduled maintenance works.

BENEFITS OF THESE WORKS

The installation of the emergency and exit lighting system now ensures a safe working environment is provided to any staff or personnel who may be required to be in the premises.
